

AMENDMENTS TO THE SPECIFICATION

Please amend the ABSTRACT as follows:

A method and apparatus are described for controlling the attitude of a vehicle $[(10)]$ in a space having at least two opposed viewable regions $[(6, 7)]$, each region being viewed by a respective first sensor $[(60, 70)]$ for sensing a first frequency band of electromagnetic radiation and a respective second sensor $[(61, 71)]$ for sensing a second frequency band of electromagnetic radiation, wherein respective first and second data sets from the first $[(60, 70)]$ and second sensors $[(61, 71)]$ for each regions $[(6, 7)]$ are produced, these second data sets are subsequently modified $[(62, 72)]$ and combined $[(63, 73)]$ with the first data sets to form respective third data sets for each region $[(6, 7)]$. The attitude of the vehicle $[(10)]$ is then adjusted $[(40)]$ until the third data sets are substantially equal.
